is our commitment to listen, innovate and provide expert solutions which help our clients to safeguard patient health around the world.

Sealed Air in Action

Patient Safety

Nexcel™ materials for pharmaceutical solutions are not just packaging—they are part of the delivery system providing superior performance in processing, container integrity and product shelf life.

Our container materials were the first free of PVC and phthalates designed for Pharmaceutical Solutions and they remain the leading reference in the market today.

Sealed Air's 50 years of plastics processing expertise continues to provide innovation in bringing new and safer products for your future developments.

We are committed to working hand in hand with our customers around the world providing technical, analytical, regulatory, and market support.

This shared expertise maximizes the benefits of selecting Nexcel materials for you and the patient.

Key Attributes

The Nexcel product range, which includes primary and overwrap films, tubing, and spike ports, provides the following features

- Steam sterilizable up to 121° C
- High productivity
- PVC and Phthalate free

- Extremely low extractables and particulates
- Compatible with a large range of drugs and solutions
- US FDA DMF registrations
- Global Pharmacopoeia compliance

Nexcel materials are recognized by equipment suppliers as the most reliable and easiest to use.

The processing window of our film is the widest of existing materials in the market, with a sealing range of more than 40 ° C. This means that Nexcel films are ideally suited to all forms of bag making and filling lines where reliability and container integrity are critical.

Case studies have shown productivity improvements of up to 10%.
